

Technology Features

- » Web-based – Cloud-First compliant
- » Hosted on-premises or remotely
- » Is a “Configurable COTS” product
- » Ability to store, track and manage virtually any type of file
- » Role-based security and access model
- » Platform independent
- » Supports Single Sign-On and Multiple Authentication
- » Secure with C&A based on NIST800-53, DIACAP and DCID 6/3

Simplified Document Management Amplified Collaboration

entellidoc is an advanced document management platform that gives you the ability to centralize, control and collaborate on enterprise-wide content. It can be implemented as an independent application or integrated with existing systems. Of course, the most powerful way to use entellidoc is to couple it with entellitrac® to create a single, seamless, integrated environment for the management of unstructured data (documents) right alongside entellitrac’s structured data (records).

entellidoc is easy to implement and simple to use. Through its web-based interface, searches are straightforward, documents are right where you expect them, and collaboration is simple.

Expand Your Expectations

Out of the box entellidoc provides every component you would expect from a collaborative document management solution: document storage, retrieval, collaboration, versioning, searching, and security for enterprise-wide control. What you might not expect is that entellidoc can store, track and manage virtually any type of file:

- Documents, Presentations, Spreadsheets
- Images, Video, Audio

You can also view, markup and annotate most files directly within entellidoc, without having to open their native applications. You probably didn't expect that either.

Get Everyone On The Same Page

Because the only effective document management systems are the ones that people use, entellidoc promotes collaboration with common sense capabilities:

- Logical organization – documents are stored where people expect to find them, with repositories configured to match your organizational structure, workflows and systems.
- Easy to find information – documents are automatically indexed and immediately available for full text searching.
- Rapid document previews – users don't have to open files to see what is in them.

FREE Prototype Offer

The best way to understand entellidoc is with a prototype.

Contact us for a presentation and demonstration.

703.709.6110
sales@micropact.com

Once we have confirmed that entellidoc is an appropriate solution, we can build a custom prototype based on a process of your choosing.

Cloud-First Compatible

entellidoc is available under the following NIST-defined¹ Cloud Computing Service and Deployment models:

- » Cloud Software as a Service (SaaS)
- » Cloud Platform as a Service (PaaS)
- » Private cloud
- » Community cloud
- » Public cloud
- » Hybrid cloud

¹<http://csrc.nist.gov/publications/nistpubs/800-145/SP800-145.pdf>

Open Architecture

entellidoc is compatible with:

- » Leading operating systems (such as Windows, Unix, Linux)
- » Database servers (such as Oracle, SQL Server)
- » All J2EE application servers
- » All common browsers
- » Internal and external data sources

- Incremental annotations and markups – if more than one person comments on a document version, that input is seamlessly combined with the previous person's notes.
- Automatic version tracking – documents are versioned when they are checked in and users can revert to previous versions as needed.
- Selective document locking – makes it possible for only one person to modify a document at a given time.

Dare to Conform

Attaining control in the midst of a collaborative environment may sound like a contradiction, but it's exactly what entellidoc allows you to do. Using role-based permissions, entellidoc makes it possible to employ an access model that mimics your organization and streamlines workflows. Because users only see what is pertinent to their domain, they don't get bogged down searching through documents that aren't relevant to what they are doing.

Want more? When you integrate entellidoc with entellitrac (or a similar system), you elevate document management to a completely new level. From here, you can manage content from both a standard document versioning and an enhanced workflow standpoint. Now your documents are also part of your processes.

Experience Elegant Architecture

Like all MicroPact applications, entellidoc's architecture is straightforward and wide open. entellidoc is written in Java and deploys to the Java EE platform. Content within entellidoc is stored in an industry standard Java Content Repository (JCR).

Secure Your Data

Both documents and associated metadata are securely stored through entellidoc's role-based security and access model. Permissions are completely configurable through a user interface CRUD (Create/Read/Update/Delete) facility. entellidoc also utilizes SSL encryption of all data.

entellidoc supports:

- Single Sign-On (LDAP, Active Directory, RSA Tokens, Authentication Portals, Smart Cards, CAC Cards).
- Multiple Authentication (can support multiples of these at one time: LDAP, Active Directory, RSA Tokens, Authentication Portals, Smart Cards, CAC Cards).

Focus On Enterprise-Scale Success

For more than a decade, MicroPact has focused on engineering web-based COTS solutions for US Government agencies and Fortune 500 corporations. Today MicroPact serves over 140 organizations and has been recognized as one of the fastest growing companies in both the region and nation, by Inc. 500, Deloitte & Touche, and Washington Technology.
